Career Objective

Computer Science engineering student with strong fundamentals and hands-on experience building backend and distributed systems. Passionate about designing reliable, scalable services and solving real world performance challenges. Seeking opportunities to take end to end ownership and contribute to production systems that operate at scale.

Experience

Full Stack Developer Intern, SRM University AP May 2024 – Aug 2024

- Developed secure backend services and internal web application modules for an alumni management platform, improving administrative workflows, data accessibility, and role-based management for university staff.
- Implemented **OAuth2 authentication**, **JWT-based authorization**, **Role-Based Access Control (RBAC)**, and secure **REST APIs** to strengthen application security, privacy, and access management for sensitive alumni records.
- Designed automated backend workflows using modular software design principles, collaborated through **Git/GitHub**, and improved application reliability, maintainability, and operational efficiency while supporting Agile development practices.

Full Stack Developer Intern, Vascan Solutions Oct 2023 – Dec 2023

- Built and deployed a production-grade company portfolio platform to showcase services and improve online presence.
- Developed scalable MERN stack components while collaborating with UI/UX designers and backend engineers.
- Improved frontend performance and API integration reliability to ensure responsive, cross-device user experiences.

Technologies

Programming Languages: Java, JavaScript, TypeScript, Python, C++

Backend & API Development: Node.js, Express.js, Spring Boot, FastAPI, WebSockets, JWT, OAuth2

Frontend Frameworks: React.js, Redux, Tailwind CSS

Databases & Cache: PostgreSQL, MySQL, MongoDB, Redis, Firebase

Cloud & DevOps: AWS (EC2, S3, IAM), Google Cloud Platform (GCP), Docker, Linux, GitHub Actions, CI/CD

Tools: Git, GitHub, Postman

CS Fundamentals: Data Structures & Algorithms, OOPś, DBMS, Operating Systems, Computer Networks, System Design, SDLC

Projects

Job Alerts Bot – Automated Job & Internship Notification System | Live Demo

- Built and deployed a cloud-native job intelligence platform using **FastAPI**, **REST APIs**, and asynchronous workflows to automate job discovery and deliver personalized notifications at scale.
- Designed a fault-tolerant, event-driven architecture integrating **Firestore**, **Gmail SMTP**, and **GitHub Actions**, achieving **97%+ notification reliability**, **100% email delivery success**, and supporting **100+ users**.

HackAssist.ai – AI-Powered Hackathon Project Management Platform | GitHub

- Developed a cloud-based project management platform using **Spring Boot**, **React**, **PostgreSQL**, and secure **REST APIs** to automate project planning and collaboration workflows.
- Integrated **GitHub OAuth2**, webhooks, and automated deployment pipelines using **Docker**, **GitHub Actions**, **Render**.

Attendance System Backend | GitHub

- Designed an event-driven backend architecture using **Node.js**, **REST APIs**, **Redis**, and **WebSockets** to enable real-time attendance synchronization and concurrent session management.
- Optimized backend performance using **Redis caching**, reducing average response latency from approximately **60 ms** to **10 ms** while improving scalability and reliability.

Education

SRM University AP, Bachelors in Computer Science Oct 2022 – Present

- CGPA: 7.99.00/10.0

Achievements

- **Amaravati Quantum Valley Hackathon 2025 – Finalist** Built *QuantumFleet* — a hybrid quantum-classical routing system using QAOA on IBM Quantum (Qiskit Runtime), integrating blockchain-secured logistics and benchmarking performance across Aer, OpenJij, and Cirq.
- **Hack SRM 6.0 – Blockchain Track (1st Place)** Won 1st place in the Blockchain track at Hack SRM 6.0 by developing an innovative blockchain-based game.
